Test Report of "The Authorized Partner" Application

Title:

Automation Testing of "The Authorized Partner"

Objective:

1. To check the entire signup and login flow of the application with full automation.
2. To handle form submission across all the signup pages.

Scope:

Sign Up and Login pages of the application was tested.

Test Environment:

- For Automation Playwright tool
- Chrome Browser
- VS Code
- GitHub

Test Summary:

Overall application was performing smooth and running reliable. Exploratory Testing was done to know how the application runs, what are its content, then started automating the application after verifying the build was stable and ready for automation. Sign Up and Login task was given to automate so, it was performing well in-terms of speed and its performance.

Defects Summary:

Didn't found any of the defect in the application but while automating the application there was difficulty in finding the stable locators of web element as it was changing dynamically after each refresh, so checked the dropdown of the pages like manually going through each locator. And in Agent Profile Page after you select "Nepal" in the country dropdown box again you have to click out of box region and can only perform next operation that made difficulty while automating the test.

Conclusion:

Overall Product Quality is better as it was maintaining safe application in term of securities vulnerabilities by providing Email and Phone Number verification code for the user. It is Good-To-Go Application.
